JOURNAL OF CRYSTAL GROWTH

Subject index

Alkali
– lead chlorides, ternary 612
Alumina 457
Aluminum
– gallium arsenide 61, 426
– gallium indium arsenide 419
– indium arsenide 419
Ammonium
– chloride 111
Apparatus
– for melt growth
– – by Czochralski method
– – – of silicon 247
– for miscellaneous purposes
– – acoustic emission analysis during crystal growth 395
– – high temperature carbon fiber spring 470
– – wetting measurement 157

Barium
– hexaferrite 97
– metaborate 199
Bismuth
– strontium calcium cuprate 105

Cadmium
– magnesium telluride 607
– telluride 133
Calcite 533
Calcium
– hydrogen orthophosphate dihydrate 331
Carbon
– fiber spring 470
Cerium
– dioxide 347
Cesium
– iodide 230
– titanyl arsenate 323
Clusters
– of interface in Bridgman furnace 75
Computer simulation
– of calcite morphology 533
– of metalorganic chemical vapor deposition 283
– of temperature field 247
– of temperature and velocity fields in floating zone 83
Constitutional supercooling
– theory of 209
Convection 145, 165, 247, 431
Copper
– aluminum selenide 551

Dendritic growth
– of ammonium chloride 111
– of lead di-iodide 453
Device characterization
– quantum wells 1, 620
– scintillators 230
Diffusional control
– of dopant transport 165
Dissolution
– of sodium tungsten bronzes 473

Epitaxy, see Thin film growth
Etching
– chemical 32, 413, 565

Gadolinium
– molybdate 598
Gallium
– antimonide 157, 620
– arsenide 1, 17, 61, 83, 176, 283
– germanium 75, 165
– indium arsenide 1, 387
– indium arsenide phosphide 309, 387
– indium phosphide 387
– phosphide 465
– scandium aluminum garnet 457
Garnets 181, 457
Germanium 75
Gold
– silver telluride 518

Hydrodynamics, see Convection

Ice 153
Indium
– aluminum arsenide 186, 300, 465
– antimonide 157
– arsenide 300, 465, 620
– phosphide 204, 465
Iron
– sulphide 448

Kinetics
– of growth 13, 17, 49, 283, 316, 387, 501, 560
– of interface control 17, 165, 239, 431
– of nucleation 13, 49, 115
– of relaxation 32

Lasers, crystals for
– frequency conversion 199
Lead
– chloride 115, 612
– di-iodide 453
– selenide 271
– sulphate 115
– tin selenide 271
Lithium
– niobate 145

Magnesium
– telluride 607
Melt growth technique
– by Bridgman–Stockbarger method
– – of cesium iodide 230
– – of gallium germanium 165
– – of germanium 75
– – of gold silver telluride 518
– – of lead chloride 612
– – of silver gallium sulphide 41
– – of ternary alkali lead chlorides 612
– by Czochralski method
– – of barium metaborate 199
– – of gadolinium molybdate 598
– – of lithium niobate 145
– – of neodymium gallium oxide 413
– – of rare earth orthoaluminates 616
– – of silicon 247
– – of terbium molybdate 598
– – theory of 247, 481, 598
– by floating zone method
– – of gallium arsenide 17, 83
– – theory of 209, 481
– by Kyropoulos method
– – of gold silver telluride 518
– by miniature pedestal method
– – of alumina 457
– – of gallium scandium aluminum garnet 457
– by uniaxial solidification
– – of ice 153
– by zone melting
– – theory of 209
– theory of 431
Mercury
– cadmium telluride 124, 565
– zinc telluride 574
Microgravity, growth under
– of gallium germanium 165
Morphological stability
– of ammonium chloride dendrites 111
– of calcite 533
– of calcium hydrogen orthophosphate dihydrate 331
– of gallium arsenide 17
– of gallium indium arsenide phosphide 309
– of growth face of gallium arsenide 17
– theory of 209

Neodymium
– gallium oxide 138, 413
Nucleation
– of lead chloride 115
– of lead sulphate 115
– of silicon carbide 71
Numbers
– Grashof 145
– Marangoni 145
– Rayleigh 145

n-Paraffin 13
Phase diagrams
– of barium metaborate/sodium oxide/sodium fluoride 109
– of cesium iodide/tellurium iodide 230
– of potassium fluoride/yttrium aluminum garnet 181
– of potassium lithium tantalate niobate 486
– of silver gallium sulphide 41
– of zinc selenide 277
Polymers 501
Potassium
– bromide 395
– lithium tantalate niobate 486
– neodymium silicates 352
Precursor
– for gallium arsenide 176
– for zinc selenide 49
Purification of materials
– of lead chloride 612

Quantum wells, see Device characterization
Quartz 560
Rare earth
– orthoaluminates 616
Residual gas in silica glas ampoule 193

Silicon 247, 265, 316, 495, 589
– carbide 5, 71
– di-oxide 560
– germanium 32
Silver
– gallium sulphide 41
Sodium
– neodymium silicates 373
– tungsten bronzes 473
– yttrium silicates 373
Solid growth technique
– by recrystallization
– – of mercury cadmium telluride 565
– – of potassium bromide 395
– by strain anneal
– – of mercury cadmium telluride 565
– theory of 395
Solution growth technique
– by electrocrystallization
– – of lead chloride 115
– – of lead sulphate 115

– by flux method
– – of barium hexaferrite 97
– – of bismuth strontium calcium cuprate 105
– – of cesium titanyl arsenate 323
– – of iron sulphide 448
– – of yttrium aluminum garnet 181
– by flux method, top seeded
– – of barium metaborate 199
– of hydrothermal growth
– – of potassium neodymium silicates 352
– – of quartz 560
– – of sodium neodymium silicates 373
– – of sodium yttrium silicates 373
– by room temperature method
– – of calcium hydrogen orthophosphate dihydrate 331
– by top seeded growth
– – of potassium lithium tantalate niobate 486
– theory of 560
Stefan problem or moving boundary problem
– theory of 209
Superconductivity materials, high T_c
– bulk
– – of BiSCCO 105
Superlattices, multilayers
– of III–V compounds 1
Surface energy, determination
– of calcite 533
– of gallium antimonide 157
– of indium antimonide 157
– of polymers 501
Surface structure
– of calcite 533
– of cerium dioxide 347
– of zinc selenide 277

Terbium
– molybdate 598
Ternary alkali lead chlorides 612
Thin film growth, epitaxy
– by atomic layer epitaxy
– – of gallium arsenide 61
– by chemical beam epitaxy
– – of gallium indium arsenide 387
– – of gallium indium phosphide 387
– – of gallium indium phosphide 387
– – theory of 387
– by chemical reaction
– – of silicon carbide 5
– by gas source molecular beam epitaxy
– – of gallium arsenide phosphide 309
– by liquid phase electroepitaxy
– – of aluminum gallium arsenide 426
– by liquid phase epitaxy
– – of aluminum gallium arsenide 426
– – of gallium arsenide 17
– of metalorganic molecular beam epitaxy
– – of gallium indium arsenide 387
– – of gallium indium arsenide phosphide 387
– – of gallium indium phosphide 387
– – of zinc selenide 49
– – theory of 387
– by molecular beam epitaxy
– – of aluminum gallium indium arsenide 419
– – of aluminum indium arsenide 419
– – of cadmium telluride 607
– – of gallium antimonide 620
– – of gallium arsenide/gallium indium arsenide 1
– – of gallium phosphide 465
– – of indium arsenide 300, 465, 620
– – of indium phosphide 465
– – of magnesium telluride 607
– – of silicon 316
– – of zinc selenide 277
– by radio frequency sputtering
– – of neodymium gallium oxide 138
– – of zinc oxide 546
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of silicon 495, 589
– – – of silicon germanium 32
– – – theory of 589
– – through evaporation and condensation
– – – of cerium dioxide 347
– – – of n-paraffin 13
– – – of silicon carbide 71
– – through metalorganic chemical vapor deposition
– – – of cadmium telluride 133
– – – of copper aluminum selenide 551
– – – of gallium arsenide 176, 283
– – – of indium aluminum arsenide 186
– – – of indium phosphide 204
– – – of mercury cadmium telluride 124
– – – of zinc selenide 49
– – – theory of 283
Tin
– disulphide 268
Tungsten 439

Vapor growth technique
– by chemical transport
– – of mercury zinc telluride 574
– – theory of 574
– by evaporation and condensation
– – of lead di-iodide 453
– – of tin disulphide 268
– – of tungsten 439

Whisker growth
– of sodium tungsten bronzes 473

Yttrium
– aluminum garnet 181

Zinc
– oxide 546
– selenide 49, 277
